Amplification of Intense Light Fields by Nearly Free Electrons

Monday 1 July 2019 15:30 (15 minutes)

We present new opportunities for enhancing and controlling lasing inside laser filaments. The novel, general mechanism relies on laser-dressed states in neutral atoms and uses shaped laser pulses to control their population and seed gain.

Authors: Dr MATTHEWS, Mary (GAP, University of Geneva); Dr MORALES, Felipe (Max-Born-Institut); Dr PATAS, Alexander (Inst. für Exp. Physik, Freie Universität Berlin); Dr LINDINGER, Albrecht (Inst. für Exp. Physik, Freie Universität Berlin); Dr GATEAU, Julien (GAP, University of Geneva); Dr BERTI, Nicolas (GAP, University of Geneva); Dr HERMELIN, Sylvain (GAP, University of Geneva); Prof. KASPARIAN, Jérôme (GAP, University of Geneva); Dr RICHTER, Maria (Max-Born-Institut); Dr BREDTMANN, Timm (Max-Born-Institut); Prof. SMIRNOVA, Olga (Max-Born-Institut); Prof. WOLF, Jean-Pierre (GAP, University of Geneva); Prof. IVANOV, Misha (Max-Born-Institut)

Presenter: Dr RICHTER, Maria (Max-Born-Institut)

Session Classification: Ultrafast quantum dynamics in laser fields
