Attosecond Photoionization Delays around the Argon Cooper Minimum

Wednesday 3 July 2019 17:45 (15 minutes)

Photoionization time delays between the 3s and 3p subshells of argon have been measured over a large energy range (34-70 eV) covering the Cooper minima in both subshells, providing stringent tests for interchannel correlation theories.

Authors: Dr ALEXANDRIDIS, Christina (CEA, CNRS, Université Paris-Saclay); Dr TURCONI, Margherita (CEA, CNRS, Université Paris-Saclay); Dr BARREAU, Lou (CEA, CNRS, Université Paris-Saclay); Mr PLATZER, Dominique (CEA, CNRS, Université Paris-Saclay); Dr BOROT, Antonin (CEA, CNRS, Université Paris-Saclay); Dr HERGOTT, Jean-François (CEA, CNRS, Université Paris-Saclay); Dr TCHERBAKOFF, Olivier (CEA, CNRS, Université Paris-Saclay); Dr SALIÈRES, Pascal (CEA, CNRS, Université Paris-Saclay)

Presenter: Mr PLATZER, Dominique (CEA, CNRS, Université Paris-Saclay)

Session Classification: Time delays and dynamics of photoionization in atoms and molecules
