## Time-resolved Orbital Imaging by Photoelectrons

*Thursday 4 July 2019 11:45 (15 minutes)*

We demonstrate imaging of bound electron wave packets following ionization. Using a pump-probe-deflect scheme, a superposition of spin-orbit states is prepared in  $\text{Ar}^+$  and a movie of the wave packet evolution is recorded.

**Authors:** KÜBEL, Matthias (Friedrich Schiller University Jena); Mr DUBE, Zack (National Research Council of Canada); NAUMOV, Andrei (National Research Council of Canada); Dr VILLENEUVE, David M. (National Research Council of Canada); Prof. CORKUM, Paul (National Research Council of Canada); Dr STAUDTE, André (National Research Council of Canada)

**Presenter:** KÜBEL, Matthias (Friedrich Schiller University Jena)

**Session Classification:** Photoelectron-based probing of atomic and molecular states
