Photoelectron Holography of Noble Gas Atoms

Wednesday 3 July 2019 18:00 (2 hours)

The interference of electronic wave packets created during ionization leaves a characteristic mark on the momentum distribution of the photoelectrons which is interpreted as the hologram of the target. We report our findings on the sensitivity of these holographic structures on the atomic species of the target.

Authors: TÓTH, Attila (ELI-ALPS, ELI-HU Non-Profit Ltd.); Dr BORBÉLY, Sándor (Babes-Bolyai University); Dr ARBÓ, Diego G. (Institute for Astronomy and Space Physics IAFE (CONICET-UBA)); Dr TŐKÉSI, Károly (Institute for Nuclear Research, Hungarian Academy of Science (ATOMKI)); Prof. NAGY, Ladislau (Faculty of Physics, Babes-Bolyai University)

Presenter: TÓTH, Attila (ELI-ALPS, ELI-HU Non-Profit Ltd.)

Session Classification: Poster session 2
