Attosecond Electron Localization in Metallic titanium

Monday 1 July 2019 18:15 (2 hours)

We investigate attosecond electron dynamics in metals with transient absorption spectroscopy supported by ab-initio calculations. We find that optical excitation of metallic titanium leads to an ultrafast electron localization and modifies electronic screening.

Authors: VOLKOV, Mikhail (LMU Munich); Dr SATO, Shunsuke A. (Max Planck Institute for the Structure and Dynamics of Matter); SCHLÄPFER, Fabian (ETH Zurich); Mrs HARTMANN, Nadja (ETH Zurich); LUCCHINI, Matteo (Dipartimento di Fisica, Politecnico di Milano); Dr KASMI, Lamia (ETH Zurich); Dr GALLMANN, Lukas (ETH Zurich); Prof. RUBIO, Angel (Max Planck Institute for the Structure and Dynamics of Matter); KELLER, Ursula (ETH Zurich)

Presenter: VOLKOV, Mikhail (LMU Munich)

Session Classification: Poster session 1
