## Nonlinear Laser Excitation of $^{229m}\text{Th}$ Isomer State by Two-Color Femtosecond Laser Fields

*Monday 1 July 2019 18:15 (2 hours)*

It is shown that excitation of the isomeric nuclear state  $^{229m}\text{Th}$  in the process of thorium atom irradiation by two-color field of Ti:Sa can be enhanced significantly with respect to other nucleus excitation processes.
