## High Power 1 TW Ti:sapphire Laser at 1 kHz for High Energy High Harmonic Generation

*Wednesday 3 July 2019 18:00 (2 hours)*

We demonstrated 1 TW Ti:sapphire laser system at 1 kHz, which uses a cavity-mode-adjustable regenerative cavity as pre-amplifier for adjustable beam waist to match the beam mode in subsequent multi-pass amplifier. The compressed pulses with power of 25 mJ in 27.1 fs, which corresponds to 0.92 TW, were realized under the pump power of 108 W with cryogenically cooling. The result will pave a way to generation of high energy XUV attosecond source based on HHG at high repetition rate.

**Authors:** Prof. TENG, Hao (Institute of Physics, Chinese Academy of Sciences); Dr HE, Peng (Institute of Physics, Chinese Academy of Sciences); Dr HE, Huijun (Institute of Physics, Chinese Academy of Sciences); Mrs LIANG, Yueying (Institute of Physics, Chinese Academy of Sciences); Mr LIU, Liqiang (Institute of Physics, Chinese Academy of Sciences); Prof. HE, Xinkui (Institute of Physics, Chinese Academy of Sciences); Prof. WEI, Zhiyi (Institute of Physics, Chinese Academy of Sciences)

**Presenter:** Prof. TENG, Hao (Institute of Physics, Chinese Academy of Sciences)
