Attosecond Correlation with Actively Stabilized Extreme Ultraviolet Interferometer

Monday 1 July 2019 18:00 (2 hours)

We developed an actively stabilized extreme ultraviolet (XUV) interferometer (stability: 7.8-as RMS over 12 hours) and thereby demonstrated the interferometric 1st-order autocorrelation of an isolated attosecond pulse with 100-as periodicity in the XUV region.

Authors: MASHIKO, Hiroki (NTT Basic Research Laboratories); Mr CHISUGA, Yuta (Yokohama National University); Mr ASAGA, Koji (Tokyo Denki University); Prof. IKUFUMI, Katayama (Yokohama National University); Prof. JUN, Takeda (Yokohama National University); Prof. TADASHI, Nishikawa (Tokyo Denki University); Dr KATSUYA, Oguri (NTT Basic Research Laboratories); Dr HIDEKI, Gotoh (NTT Basic Research Laboratories)

Presenter: MASHIKO, Hiroki (NTT Basic Research Laboratories)

Session Classification: Poster session 1
