Ultrafast Demagnetization Probed by Attosecond Diffraction Spectroscopy

Wednesday 3 July 2019 11:15 (15 minutes)

Broadband attosecond pulses are employed for multimodal probing of the structural response and the magnetic order in Co-Pt magnetic multilayers following ultrafast photoexcitation observing that the onset of demagnetization is time-delayed by approximately 4 fs.

Authors: Dr ZÜRCH, Michael (Fritz Haber Institute of the Max Planck Society); Dr GENEUX, Romain (UC Berkeley); Mrs LEGARE, Katherine (INRS Montreal); Dr GUGGENMOS, Alexander (UC Berkeley); Mr CHANG, Hung-Tzu (UC Berkeley); Prof. CUSHING, Scott K. (Caltech); Prof. SPIELMANN, Christian (FSU Jena); Prof. LÜNING, Jan (Sorbonne University); Prof. LÉGARÉ, François (INRS Montreal); Prof. LEONE, Stephen R. (UC Berkeley)

Presenter: Dr ZÜRCH, Michael (Fritz Haber Institute of the Max Planck Society)

Session Classification: Ultrafast spectroscopy of electronic and magnetic processes in solids
