Electron Correlation Driven Non-adiabatic Relaxation in 2D Molecular Structures Following Excitation by an Ultrashort XUV Pulse

Wednesday 3 July 2019 15:15 (15 minutes)

We used time-resolved XUV-IR photoelectron spectroscopy to probe the ultrafast dynamics in highly excited large carbon based molecules. Our results show evidences of manybody driven relaxation and electro-nuclear coherences. Analogies with the behaviour of 2D materials will be presented.

Authors: HERVE, Marius (ILM (Lyon)); DESPRÉ, Victor (Universität Heidelberg); Dr MARCINIAK, Alexandre (ILM (Lyon)); Dr LORIOT, Vincent (ILM (Lyon)); Dr KARRAS, Gabriel (ILM (Lyon)); CONSTANT, Eric (ILM (Lyon)); Dr KULEFF, Alexander I. (Universität Heidelberg); Dr LÉPINE, Franck (ILM (Lyon))

Presenter: HERVE, Marius (ILM (Lyon))

Session Classification: High-harmonic spectroscopy of molecular processes
