XUV Spectral Interferometry and Generation of Isolated Attosecond Pulses from Relativistic Plasma Mirrors

Thursday 4 July 2019 14:45 (15 minutes)

We present laser waveform-dependent extreme ultraviolet high-order harmonic radiation from a relativistic plasma mirror that supports a well-isolated attosecond pulse. Spectral interferometry reveals information about its temporal structure and the relativistic generation mechanism.

Authors: VEISZ, László (Umea University); Mr KORMIN, Dmitrii (Max-Planck-Institut für Quantenoptik); Dr BOROT, Antonin (Max-Planck-Institut für Quantenoptik); Dr MA, Guangjin (Peking University); Dr DALLARI, William (Max-Planck-Institut für Quantenoptik); BERGUES, Boris (Max-Planck-Institut für Quantenoptik); Dr ALADI, Márk (Wigner Research Centre for Physics); Dr FÖLDES, István (Wigner Research Centre for Physics)

Presenter: VEISZ, László (Umea University)

Session Classification: Harmonics from solid surfaces and new approaches
