Electronic Wavefunctions Probed by All-Optical Attosecond Interferometry

Thursday 4 July 2019 11:30 (15 minutes)

We directly measure electron-ion scattering phase shifts in atomic systems using optical interferometry in the extreme ultraviolet domain. Our method reveals partial-wave scattering phase shifts and structural phase jumps, enabling studies of multielectron phenomena.

Authors: Dr KRÜGER, Michael (Weizmann Institute of Science); Dr AZOURY, Doron (Weizmann Institute of Science); Mr KNELLER, Omer (Weizmann Institute of Science); Ms ROZEN, Shaked (Weizmann Institute of Science); Dr BRUNER, Barry D. (Weizmann Institute of Science); Dr CLERGERIE, Alex (University of Bordeaux); Dr FABRE, Baptiste (University of Bordeaux); Dr PONS, Bernard (University of Bordeaux); Dr MAIRESSE, Yann (University of Bordeaux); Prof. DUDOVICH, Nirit (Weizmann Institute of Science)

Presenter: Dr KRÜGER, Michael (Weizmann Institute of Science)

Session Classification: Photoelectron-based probing of atomic and molecular states
