High Intensity High-order Harmonic Generation by Optimizing Phase Matching Condition

Wednesday 3 July 2019 18:00 (2 hours)

High harmonic generation driven with 16 mJ /35 fs Ti:sapphire laser was studied. By optimizing the media length, gas pressure and the position of the gas cell, we obtained collimated XUV radiation at the same time with enhanced energy.

Authors: Ms LIANG, Yueying (Institute of Physics, Chinese Academy of Sciences); Mr LIU, Liqiang (Institute of Physics, Chinese Academy of Sciences); Dr HE, Xinkui (Institute of Physics, Chinese Academy of Sciences); Dr ZHAO, Kun (Institute of Physics, Chinese Academy of Sciences); TENG, Hao (Institute of Physics, Chinese Academy of Sciences); Dr WANG, Junli (Xidian University); Prof. WEI, Zhiyi (Institute of Physics, Chinese Academy of Sciences)

Presenter: Ms LIANG, Yueying (Institute of Physics, Chinese Academy of Sciences)

Session Classification: Poster session 2
