Effects of the Pump Wavelength on Laser-Induced Ultrafast Demagnetization

Wednesday 3 July 2019 18:00 (2 hours)

A high harmonics source is used to probe the dynamics of laser-induced ultrafast demagnetization with respect to the wavelength of the pump beam. Longer pump wavelengths are found to increase the initial quenching levels.

Authors: LÉGARÉ, Katherine (INRS-EMT); LEGARE, Francois (INRS-EMT); CARDIN, Vincent (INRS-EMT); BALCIUNAS, Tadas (TU Wien); JAL, Emmanuelle (UMPC); VODUNGBO, Boris (UMPC); VARIN, Charles (Cégep de l'Outaouais); JAOUEN, Nicolas (Synchrotron SOLEIL); Prof. LÜNING, Jan (Sorbonne University); BALTUSKA, Andrius (TU Wien, Center for Physical Sciences & Technology)

Presenter: LÉGARÉ, Katherine (INRS-EMT)

Session Classification: Poster session 2
