## Photodissociation Dynamics of the LiF Molecule

*Wednesday 3 July 2019 18:00 (2 hours)*

The photodissociation of LiF is usually described on the nonadiabatically coupled lowest two  $\Sigma$  electronic states considering only the vibrational motion of the molecule. In the present work we highlight the importance of both the lowest  $\Pi$  state and the molecular rotation.

**Authors:** Dr TÓTH, Attila (ELI-ALPS, ELI-HU Non-Profit Ltd.); Dr CSEHI, András (University of Debrecen, ELI-ALPS, ELI-HU Non-Profit Ltd.); Prof. HALÁSZ, Gábor J. (University of Debrecen); Prof. VIBÓK, Ágnes (University of Debrecen, ELI-ALPS, ELI-HU Non-Profit Ltd.)

**Presenter:** Dr TÓTH, Attila (ELI-ALPS, ELI-HU Non-Profit Ltd.)

**Session Classification:** Poster session 2
